

COMBIMASS® Biogas Flowmeter and Biogas Analyser

Variable methane concentrations with wet and corrosive gases combined with dirt particles are a challenge for each Gas Mass Flow Measurement System. A gas mass flow meter combined with a gas analyser allows correcting the mass flow reading depending on the measured methane concentration in the gas. The biogas analyser is a very compact and rigid hand held instrument. The analyser has an outstanding performance and is very flexible and easy to handle. The improvement of measurement accuracy and reliability causes a significant increase to the efficiency in the energy generation out of biomass.
